Different By Design

Flomore Products are American made chemical injectors, valves, and accessories available SAME DAY!

Richart Distributors, Inc. was founded in 1965 in Oklahoma City, Oklahoma. Since 1965, the company has been a vital distributor of quality-made products, service, and customer satisfaction. In 1990, Richard Pickens decided to form his very own line of quality, affordable products. The Flomore product line is an innovative and groundbreaking line of chemical injectors, valves, and accessories.

Flomore is a large corporation with multiple warehouses and pump service dealers across the United States and Canada, with international business growing every day.

Flomore has set the bar for the competition by having the ability to quickly process and ship orders on the same day. We thrive in providing the best service possible by constantly testing and improving product capabilities and quality.

Chemical Injectors

1300 Series

The 1300 Series injector is designed to utilize the motion of the walking beam of a pumping unit and inject small amounts of chemicals per day (less than a pint to a few quarts with injection pressures up to 1500 PSI). This injector may be double headed with different size plungers.

3000 Series Solar

Our 3000 Series is a positive displacement solar pump powered by solar panels creating environmentally friendly energy. The 3000 Series includes a crosshead design, with plunger stroke adjustment, easily changing the distance traveled by the plunger by using a plunger pin. The Flomore Bottom Alignment Bar with two sealed bearings creates a straight line motion for the crosshead to travel, maximizing efficiency. This design saves energy usage from the battery. Our standard model includes a 100 watt panel, 12/12 regulator, battery box, deep cell battery, pole type stand, adjustable timer with temperature control adjustable from 0°F - 50°F, and a correctly sized pump to meet your requirements.

3400 Series

The Flomore 3400 Series is electric driven and can have 1-4 heads ran by a single motor and gear reducer (30 SPM or 60 SPM). Each fluid end is adjustable while the pump is running. This injector is available in 5 different plunger sizes that will pump between 2 GPD minimum (3/8" head) and 880 GPD maximum (1 1/4" head) from 500 PSI up to 7500 PSI. The 3400 Series comes standard with stainless steel heads. Ductile iron heads are available upon request.

Chemical Injectors

3500 "Wolf" Series

The Flomore 3500 "Wolf" Series pumps are electric driven, positive displacement pumps utilizing C-faced motors and common gear reducers. The 3500 can be configured as a Simplex, Duplex, Triplex, or Quadplex utilizing one gear reducer and motor. The gear reducers are available in 30 and 60 strokes per minute configurations. The 3500 Series can fill many application requirements of different flows and pressures.

3800 Series

The design for the 3800 Series is probably the oldest pneumatically (air or gas) driven injector. It can be double headed with different or same size plungers in order to handle different chemicals at different rates and pressures.

4400 Series

Our 4400 Series is an electric driven injector that can utilize any of the 4 available plunger sizes or three gear ratios with a single head or up to eight heads for a combination of pressure and volume requirements, driven by one motor. The volume pumped can be changed with a simple turn of a micrometer knob from 0-100% of capacity. Also available in corrosion resistant trim.

Chemical Injectors

4500 Series

The Flomore 4500 Series injector features 3/4" and 1" plungers and can be dual headed. These electric driven injectors can handle pressures up to 300 lbs. with volumes up to 1300 GPD. Plunger material is 17-4 stainless with Armaloy surface or ceramic coated.

5020 Series

The 5020 Series is one of two diaphragm, gas driven injectors we offer. This injector is typically used to inject methanol in larger quantities and higher pressures (up to 12,000 PSI with hard packing, 1/4" head) at the Christmas tree and at lower pressures in gas processing and pipeline applications. Also used to deliver corrosion inhibitor where needed.

5200 Series

The 5200 Series injector is our other diaphragm, gas driven, plunger pump. It is designed to handle less volume and lower pressures (up to 6000 lbs.). This injector has the least amount of moving parts of any other comparable pump. Stainless steel, o-ring type, bottom and upper seating materials are offered as well as metal-to-metal seats.

Chemical Injectors

6200 Series

The 6200 series pump consists of a series of basic pump options all developed from a modular power unit. All units are pneumatically driven, positive displacement, single or double acting reciprocation pumps. This pump is used offshore on platforms and onshore at gas plants.

Flomore's Model 2000 Tank Gauge utilizes a simple push-pull operation for test (push) run (pull). All metal parts are 303 or 304 stainless steel. The movable level indicator is also made from stainless steel, which means it will not be affected by sunlight or break like an o-ring.

Tank Gauge

Gauge Glass

Our "Unified" gauge glass is manufactured for fluid sight level work in a wide range of applications. Highly chemical and corrosion resistant borosilicate glass noted for its clarity and strength. Redline or clear, 12"-72" available in various thickness.

Drum/Pump Setting Gauge

Flomore's 200.01 and 400.01 Drum Gauge assemblies (pictured) are available in standard, plastic, or stainless steel construction. Gauges consist of our 55 gallon 300 series drum gauge mounted on a 9" 316 stainless steel nipple with a 1/4" female nipple for vertical chemical pump installation.

Flomore glass guards are 18-gauge aluminum for maximum protection with minimum weight. Available in 24", 36", and 48" lengths. Also available with our proprietary anti-rust coating to ensure long-lasting protection from the elements.

Glass Guard

Flomore Valves

Swing Checks

The Flomore ductile and steel threaded end swing check valves meet MR-01-77 NACE standards. 1"-4" are available with pressure ranges from 300-2000 psi WOG. The standard seal material is Buna-N (180° F). We can also trim with Flomore's "Coldseal" to -50° F and to 400° F with Viton. Standard clapper material is carbon steel and we also offer 17-4 stainless steel in the 1" and 2" valves. The 3" and 4" valves have a ductile iron clapper.

Ball Checks

The Flomore ductile iron, carbon steel, and stainless steel ball checks can be trimmed with a Viton seal assembly for elevated temperatures and chemical resistance. Because of Mr. Pickens' design difference, our ball check can be used next to a compressor without beating the ball out of the valve. Standard trim is stainless steel ball, Buna-N seal with stainless support member. Available in 1/2", 3/4", 1", and 2" sizes and pressures up to 2000 pounds in ductile or 5000 pounds in WCB Carbon Steel.

Carbon Steel Swing Checks

Our Investment Cast Carbon Steel Swing Check valves have threaded ends, material specification ASTM A-216 WCB Carbon Steel available in working pressures from 2000#, 3000#, 3600#, and 5000# in 1" and 2" sizes. Buna-N seals are standard (180° F Max). Optional Viton seals are available (400° F Max). Standard clappers are ASTM A-216 WCB with 316 SS clappers optional.

Flomore Accessories

Line Checks

Inline Check Valves are available in brass, 303, 304, or 321 stainless steel and inconel. Several types of seating material are available including Buna-N, Viton, Teflon, Aflas, Kalrez, or metal to metal. Inline Checks are available in 1/8", 1/4", 3/8", and 1/2" sizes with pressure ranges from 3,000-15,000 psi.

Atomizing Nozzles

The 1/4" female x 1/2" male NPT stainless steel atomizing nozzle does a great job of putting the methanol or scale inhibitor into the gas stream as a mist, the most effective and least costly method of delivering the product into the flow. The orifice size is 0.060 in. and the core size is 225.

May 14, 2009

I think it is time for someone to call to the attention of our customers and our friends, the danger we are facing, when we deal in import products, it is a never ending down hill slide.

Right now "American Made" products are under attack by much lesser priced items from China.

We as a business (Oil and Gas Industry) do not need anything, regardless of price from China. Wake up friends, we are in a desperate struggle with a communist nation, who seek to destroy the capitalistic countries of the world and the USA would be at the top of their list.

So if we all decide to lower our prices to compete with imports that means we must also compete at the wage scale. I reduce my pay to my employees to less than .25 cents per day, cut off their 401K insurance benefits, no holidays, no sick leave, no fun at the work place. Then I have to convince all my raw material suppliers that they also should follow suite and so on done the line. It would effect every American, yes even you. So now I have got all this done! Now what do I have? China America, is that what we want? I DO NOT. Therefore I am not going to send US dollars to someone who wants me and my friends to live in extreme poverty.

There are a number of good companies that can provide you with quality, USA made products at a reasonable price, if you choose not to stock and sell Flomore products that certainly is your choice, but please buy American Made.

Sincerely,

Richard L. Pickens
CEO
